

## Sheet Steel Test Station

Measurement of potential between buried structure and a reference electrode is the most frequent test performed in operation of a cathodic protection system. Test station is a simple method to monitoring this potential in order to ensure that adequate current is supplied to buried metallic structures.

YUXI produce a range of test stations with numerous colors, shapes and test lead configurations, and they can be made from high impact strength molded plastic, cast iron and concrete as well. Most of the time, the test stations are installed in wild field. Therefore its reliability and maintenance is very critical to a complete cathodic protection system. Our test termination is composed of corrosion resistant nickel plated brass lugs to guarantee long term accurate reading, and all parts is easy to be removed with standard replacement.

## FEATURES

- ▶ Simple to install
- ▶ Low test cost
- ▶ Long service life
- ▶ High security
- ▶ Higher test quality
- ▶ More scalable for future enhancements
- ▶ Wide choice of accessories

## GENERAL SPECIFICATION

<b>Material</b>	Cast Iron, Sheet Steel, Concrete, Molded Plastic
<b>Number of Terminals</b>	5-10 nos
<b>Conduit</b>	1500-2000mm
<b>Color</b>	Black, Orange, Blue, Gray
<b>Locking Device</b>	Available on Cast Iron and Concrete Type
<b>Identification</b>	Tag Plates and Name Plate Supplied with SS316L with Screw Sets
<b>Ambiant Temperature</b>	Up to 55 Degree Centigrade
<b>Climate</b>	Onshore Corrosive Environment
<b>Humidity</b>	95% at 43 Degree Centigrade
<b>Documentation</b>	Drawing, Certificate of Conformity Factory Acceptance Report

# SHEET STEEL TEST STATION

<b>Terminal Box</b>	400x250x150mm"
<b>Conduit</b>	50mm Dia. x 1500mm
<b>Terminal</b>	Up to 10 nos
<b>Color</b>	Orange/Gray/White/Red/Blue
<b>Door Locker</b>	Available
