

VERTICAL TENSION ANODE STRING

PRODUCT DATA SHEET

VERTICAL TENSION ANODE STRING

This vertical tension anode string is an anode array that comprises a series of MMO tubular anodes secured into the perforated PVC casing pipe and chained onto an electrical cable. The terminal anode (the last anode on a string assembly) has a metal loop for attaching a weight.

It is a cost-effective option used in the impressed current cathodic protection for the life extension of offshore or marine structures. It can be installed without divers or ROV equipment

VERTICAL TENSION ANODE STRING

PRACTICAL APPLICATION

Our vertical tension anode string is applied in the remote monitoring impressed current cathodic protection (ICCP) system for Hong Kong offshore LNG terminal. The cathodic protection current flows from the anode string in the sea water to the jacket, thus polarizes the jacket to a potential — achieving the protection of the jacket from corrosion.

Industrial Corrosion Control Solutions Provider

Established in 2003, YUXI has over a 20-year heritage of innovation in corrosion control science and technology. We're a spirited team of ambitious thinkers and pioneer sheeps with a common goal in mind: protect our clients' assets from corrosion with cost-saving measures.

We have the most comprehensive catalog of cathodic protection materials including anodes, transformer rectifiers, backfills, coatings, etc. Our anodes and supplies are manufactured to strict quality standards through an ISO 9001 quality management system and are guaranteed to offer excellent performance in the industry.
